

EXPORT CAPABILITY PROFILE

Coco Palms Skylanes

and Allied Products

100% organic, sulfur-free coconut oil · edible and bulk grades

Pure in every drop.

ISO 9001 · FSSAI · NABL

WHO WE ARE

Company at a glance

Coco Palms Skylanes and Allied Products has been trading in coconut and allied products since 2013. In 2026 we commissioned a purpose-built dehydration facility on our four-acre site in Chengalpattu district, Tamil Nadu. Whole nuts are received at our own intake yard, cut and washed on site, dried in a catalytic infrared dehydrator, then pressed and filtered into finished oil. Thirteen years of trade experience now sits behind a drying plant specified to current food-safety standards rather than retrofitted to them.

Trading since	2013
Dehydration facility	Commissioned 2026
Plant location	Chengalpattu, Tamil Nadu
Site area	4 acres
Daily nut intake	100,000 nuts
Workforce	30+
Quality accreditations	ISO 9001, FSSAI, NABL

Drying halls from above - the plant's insulated chamber block

100,000 nuts per day

10 tonnes of material dried per 12-hour batch

PRODUCT RANGE

What we supply

01 Coconut Oil, Edible Grade

- Expeller-pressed from infrared-dried kernel
- Sulfur-free - no chemical used at any stage
- FFA below 0.5% · moisture below 0.1%
- 200 ml / 500 ml / 1 L PET · 5 L jerry can

02 Coconut Oil, Bulk

- Same line and same specification, bulk packed
- Filtered grade; RBD available on request
- For industrial and repacking buyers
- 15 kg tin · 200 kg HDPE drum · flexitank

Allied products copra cake / de-oiled cake, a direct by-product of oil extraction. Further lines: **TO CONFIRM**

HOW IT IS MADE

From whole nut to filtered oil

1

Intake

Nuts received and unloaded in our raw material yard

2

Automated cutting

Conveyor cutting system halves every nut evenly

3

Trays and trolleys

Halves arranged on drying trays and loaded

4

High-pressure wash

Water spray removes dust and impurities

5

Infrared dehydration

10 tonnes per 12 hours, moisture below 10%

6

Tray inspection

Every tray checked by trained staff and supervisors

7

Scooping and pulverising

Kernel lifted from shell, then reduced for pressing

8

Expelling and filtration

Mechanical press, then advanced filtration

No sulfur or any other chemical is used at any stage. The dehydration method itself is what makes chemical-free processing possible.

STEP 01

Sourcing and intake

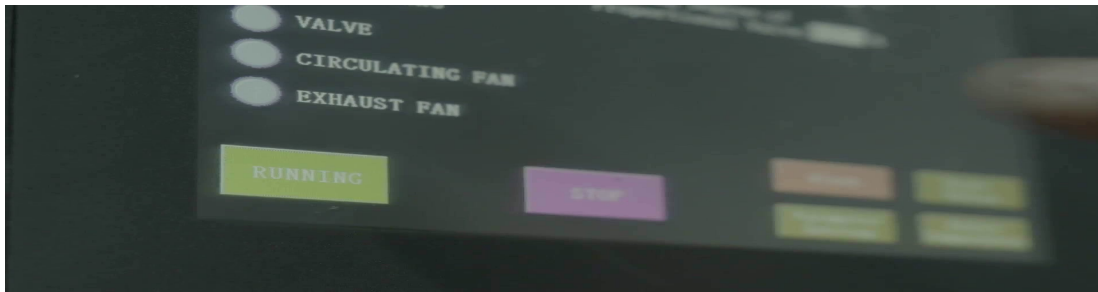

Nuts arrive at the plant by tipper and are offloaded directly onto our spacious raw material yard by our own uniformed crew. From there they are fed into an automated conveyor cutting system that halves every nut evenly, so the nut is opened within the same site it was received on.

Sourcing region	Delta region, Tamil Nadu
Procurement	Direct from growers and regional mandis
Intake per day	100,000 nuts
Nut variety	TO CONFIRM

Catalytic infrared dehydration

The dehydration chamber block inside the main hall

PLC touchscreen holding chamber temperature in any climate

Drying decides the quality of the finished oil, so it is the step we have engineered hardest. Instead of sun drying we use a European catalytic infrared dehydrator - one of the fastest and most efficient methods of coconut dehydration available.

How the chamber works

- Infrared-radiating metal infusors generate controlled heat waves
- Platinum metal-plated walls, ceiling and doors reflect heat from every direction
- A compressor draws atmospheric air through a dehumidification system
- Roughly 3,300 sq ft of drying area

10 tonnes in 12 hours, to below 10% moisture

Sun drying needs five days to reach only 20%

STEPS 04 AND 06

Washing and inspection

High-pressure water spray wash, before dehydration

Personnel hygiene

- Hairnets, face masks and gloves on the line
- Company-issued uniforms throughout
- Food-contact surfaces in stainless steel

Every tray inspected by trained staff and supervisors

Plant and surfaces

- Enclosed drying rooms, not open-air yards
- Stainless trays and troughs at every wet stage
- Sealed washable floors and strip-curtain barriers

From dried kernel to filtered oil

07

Scooping and pulverising

Once dehydration is complete the kernel lifts cleanly away from the shell and is scooped out, then pulverised into smaller pieces ready for pressing.

Moisture at scooping	below 10%
Batch size	10 tonnes per 12 h

08

Expelling and filtration

The pulverised kernel is fed into an expeller and pressed mechanically. The extracted oil then passes through advanced filtration to finished grade.

FFA at despatch	below 0.5%
Chemical use	None - sulfur-free

QUALITY ASSURANCE

Tested, not assumed

Quality is managed under an ISO 9001 system, the plant is FSSAI licensed, and testing is backed by NABL accreditation - the Indian national standard for laboratory competence. Every manufacturing batch is tested by our quality assurance team in our own in-house laboratory before it reaches a customer.

1

ISO 9001
Quality management system

2

FSSAI
Indian food safety licence

3

NABL
Accredited laboratory testing

Release specification per batch

Parameter	Method	Limit
Moisture	IS 548	0.10% max
Free fatty acid	AOCS Ca 5a-40	0.5% max
Peroxide value	AOCS Cd 8-53	10 meq/kg max
Total plate count	ISO 4833	10,000 cfu/g
Yeast and mould	ISO 21527	100 cfu/g max
Foreign matter	Visual	Absent

Limits shown are for edible-grade coconut oil, tested per batch in our in-house laboratory before release.

Packaging, logistics and terms

Standard terms below. All are negotiable against confirmed volume and destination.

Item	Detail
Retail pack sizes	200 ml · 500 ml · 1 L PET · 5 L jerrycan
Bulk pack format	15 kg tin · 200 kg HDPE drum · flexitank
Minimum order quantity	One 20ft FCL
Units per 20ft / 40ft container	16-18 MT / 24-26 MT
Port of loading	Chennai / Ennore, Tamil Nadu
Lead time from order	15-21 days from confirmed order
Incoterms offered	FOB · CFR · CIF
Payment terms	30% advance, balance vs B/L; or L/C at sight
Private label / OEM	Available
Shelf life	18 months in original sealed pack

Handling between drying and finishing

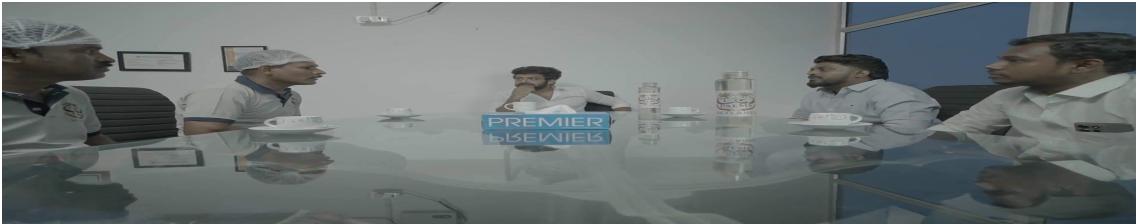

Flexible on structure

Tell us your volume, pack format and destination port and we will quote FOB or CIF against it.
